

NEWS FLASH- CGI Implements HazCom System in Record Time

January 2009

CGI Utilizes Technical and IT Expertise to Implement Hazard Communication Solution for Energy Company in 3 months.

When a global Energy company acquired 4 oil platforms in the North Sea last year, they were faced with the challenge of implementing a hazard communication solution in under four months, to meet their operational go-live date. As part of what is arguably the biggest transition of offshore oil field interests in the UK North Sea's history, CGI helped them meet this challenge by implementing **ProSteward Online** on the 4 offshore platforms in just over 3 months.

To support this project, CGI provided expertise in project management, business process design, IT implementation and configuration, and hazard communication. The successful rapid implementation was made possible by leveraging an existing software solution, **ProSteward Online**; a CGI solution built to support organizations in meeting global chemical hazard communication regulations. This solution is now being used by oil platform workers to access safety information for hazardous materials that are used to support operations at the four offshore sites.

ProSteward Online is a configurable comprehensive hazardous material data and document repository that provides web-enabled access to chemical data for downstream users. It includes chemical inventory tracking and environmental reporting capabilities in a user-friendly tool for industrial facilities.

ProSteward Online assists with:

- Document Management--Manages (M)SDSs and other hazard communication documents in multiple languages and a variety of document formats
- Chemical Data Management--Maintains hazard, transport, disposal, bio/rad data
- Chemical Inventory--Tracks chemical inventory by location, down to the container level
- Chemical Approval Process--Provides a standardized approval process for chemical data to operations with consistent workflow for the safe introduction and use of new chemicals in the organization
- Regulatory Management--Provides an extensible list-based process for regulatory reporting (e.g. SARA 311/312)
- Integration with other systems (e.g. reporting, distribution, authoring, industrial hygiene, ERP)

About CGI

CGI is a full service IT and Managed Services Provider with focused industry expertise and innovative service models that help clients achieve their business goals. We have extensive experience in delivering high-quality, integrated regulatory compliance solutions to global enterprises through a combination of proprietary and other best-in-class solutions that leverage our systems integration expertise, domain health and safety expertise and deep experience across industrial segments.

CGI provides an integrated platform of environmental, health, safety; quality/audit and compliance solutions that help clients better serve their markets, improve and sustain competitive advantage, and reduce overall compliance risk.
