

PragmaPROOF

Instant Interactive Information for Multiple Requests

CGI offers a complete range of information technology and business process services and is committed to provide its clients with solutions that meet their needs.

Our Utility Solutions team focuses on providing industry-leading solutions and services that span the horizontal workflow between clients, control rooms and crews, benefiting a global client base rooted in the electric, gas and water utility markets. CGI enables the real-time management of mission-critical processes by offering a feature-rich and field-proven solutions portfolio.

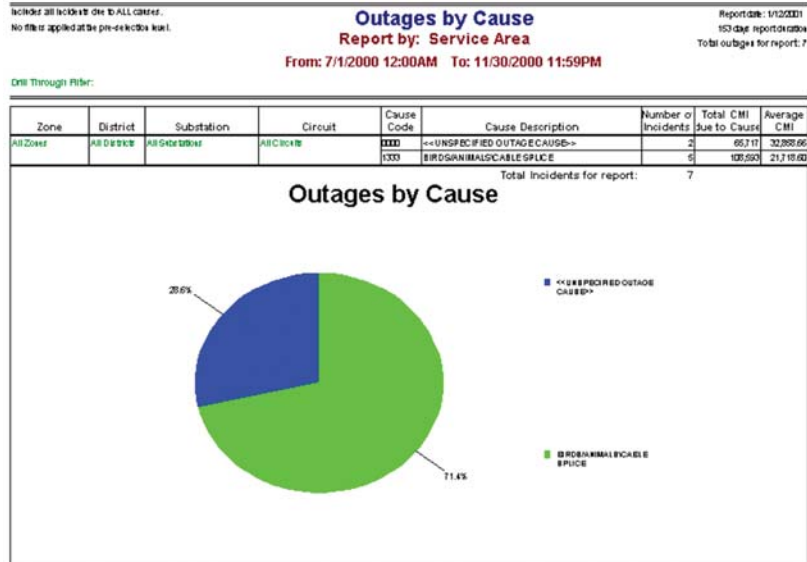

THE REGULATORY BOARD IS COMING TO VISIT. ARE YOU PREPARED?

PragmaPROOF

PragmaPROOF is the comprehensive and versatile report-generation module in the our Outage and Network Mangement Solution suite. Designed with Business Objects and Cognos Impromptu reporting tools to ensure compliance with IEEE and other reporting standards, it combines accurate, detailed information with powerful drill-down and filtering capabilities.

How PragmaPROOF Works

PragmaPROOF is a high-level information retrieval and report-generation system. It consists of network-intelligence templates capable of generating more than 100 different kinds of reports, including regulatory statistics such as ASAI, CAIDI, CAIFI, SAIDI, SAIFI and CMI. PragmaPROOF retrieves and organizes information stored in the OMS Data Environment, a set of complex data models that optimize data mining and data transformation. A user-friendly GUI permits easy and rapid access to this environment, generating the desired customized and information-rich reports and dramatically reducing the standard time taken to create these reports.

How PragmaPROOF Works for Your Business

PragmaPROOF provides:

- **Automated Data Retrieval and Report Generation**
Accurate and efficient processing of data derived from multiple sources for customized and dynamic report generation.
- **Detailed Filtering**
Enhanced and refined filtering functionality designed for effective control over event analysis and report generation, including details such as cause, equipment type, occurrence and scheduled interruptions.
- **Diverse Range of Available Reporting Modes**
Circuit analysis reports, damage summaries for equipment, networks and plants by branch fuses, poles, primary and secondary services, detailed output analysis on an annual or a monthly basis, executive summaries, performance-rating for crews, equipment personnel, division and state levels, outage and storm data.
- **Event Specific Report Generation**
Generation of detailed reports for specific network events, focusing on cause, data range, equipment type, occurrence, scheduled or unscheduled interruptions among other criteria, that are ideal for processing nested incidents or outages. PragmaProof revolutionizes how service providers interact with the media, standards organizations and regulatory bodies. Accurate and high-level reporting are critical to a company's ability to develop dynamic, proactive service provision strategies that are highly responsive to customer needs.
