Challenges facing organisations

CUSTOMER

Organisations need to change the way they communicate and engage with customers and citizens.

PEOPLE

With a changing mix of working practices between remote and office working, virtual agile practices will need to continue to evolve moving forward.

BUSINESS OPERATIONS

To help mitigate risk and uncertainty, businesses need to accelerate the adoption of agile ways of working and transformation of the value chain.

FINANCIAL

Across all industries, organisations are facing significant financial pressure, with a major focus on cost containment and reduction.
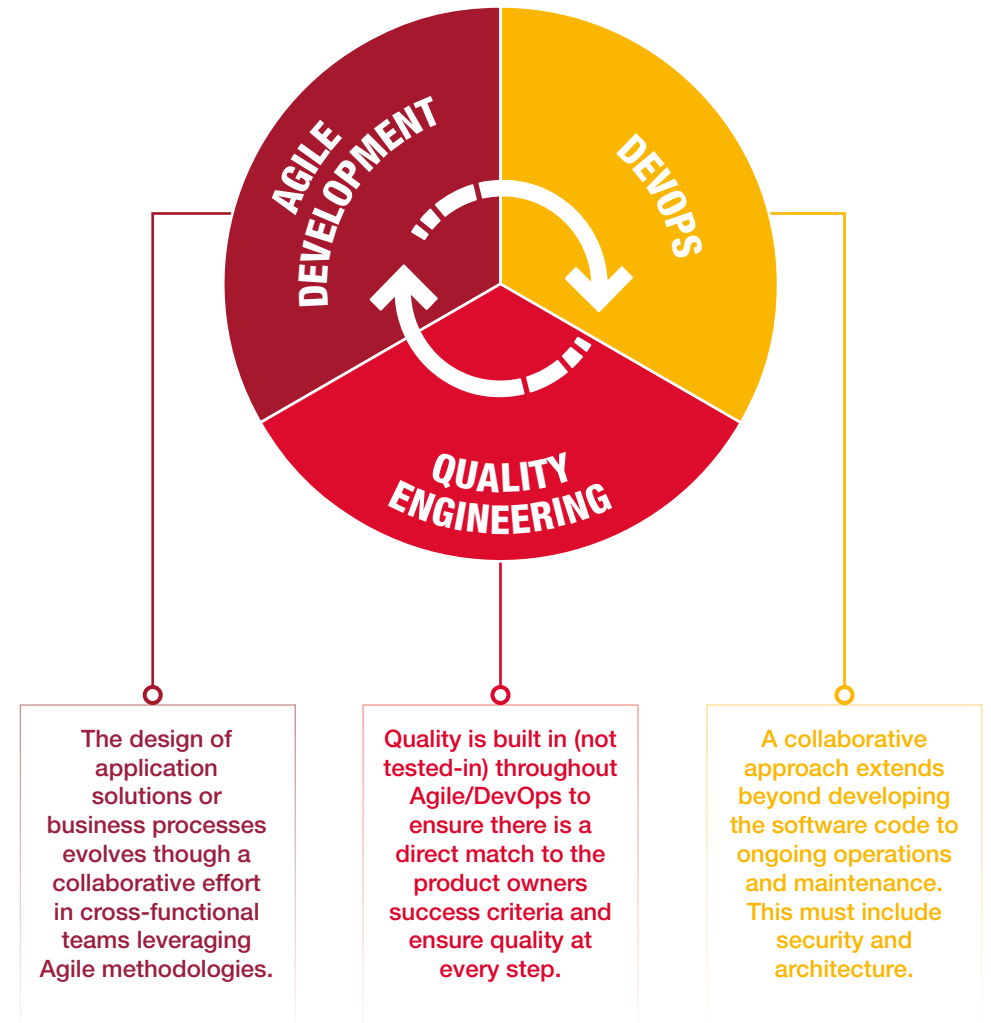

TECHNOLOGY

There is an ongoing challenge with integration and new and legacy systems. Companies need to manage sudden changes in volume and be able to make real-time decisions.
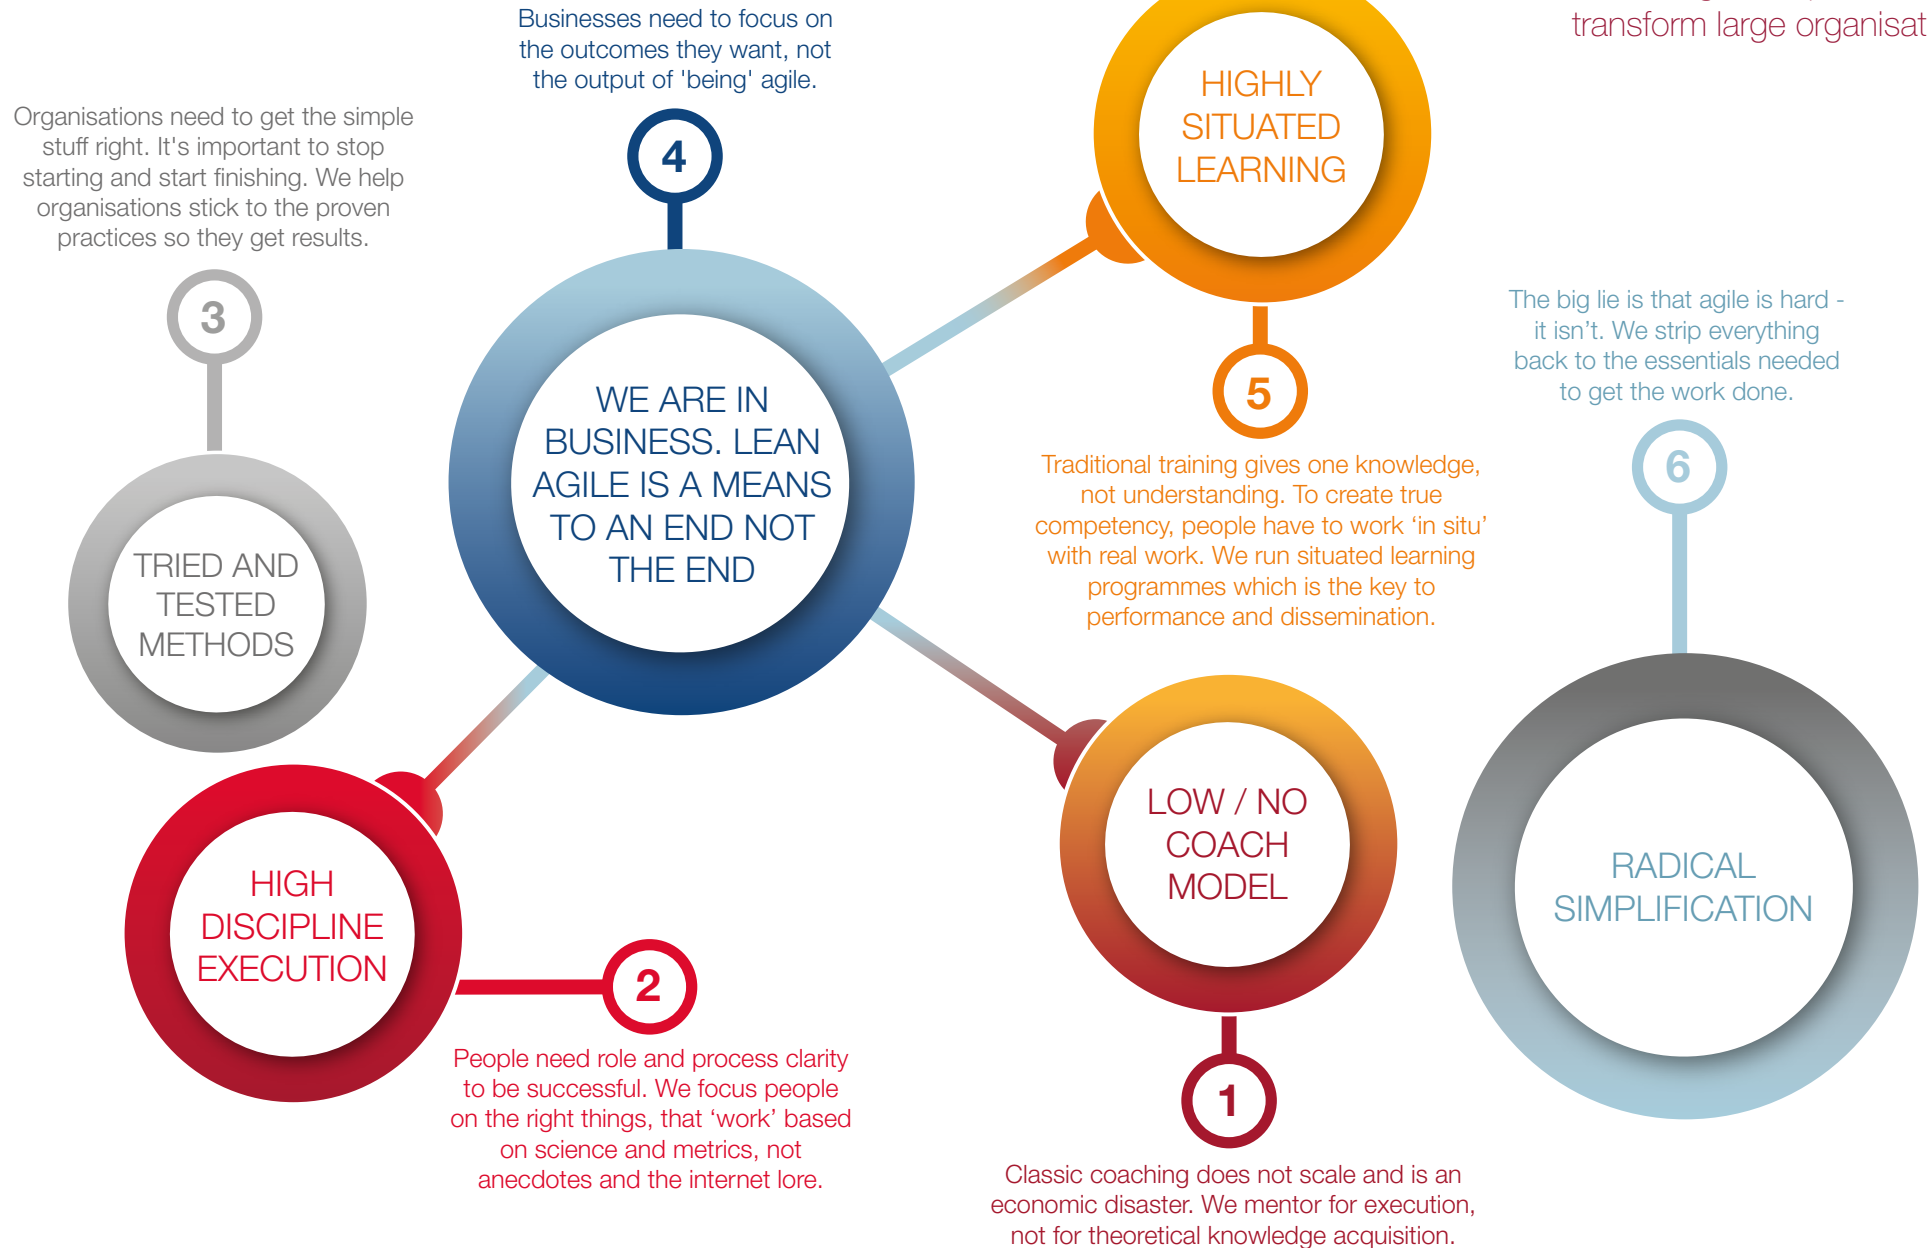

Agile supports business success

From our CGI Global Insights Report, only **12%** of executives said that they were seeing results at an enterprise level from their digital strategy. Where executives were seeing success, an agile operating model was quoted as being a key lever to producing those results*.

AGILE DEVELOPMENT

DEVOPS

QUALITY ENGINEERING

The design of application solutions or business processes evolves though a collaborative effort in cross-functional teams leveraging Agile methodologies.

Quality is built in (not tested-in) throughout Agile/DevOps to ensure there is a direct match to the product owners success criteria and ensure quality at every step.

A collaborative approach extends beyond developing the software code to ongoing operations and maintenance. This must include security and architecture.

*Figures taken from CGI Global Insights report 2020. Annually, CGI leaders around the world meet with business and IT executives to gather their perspectives on the trends affecting their enterprise, In 2020, we met with 1,447 business and IT executives across banking, communications, government, health and life sciences, insurance, manufacturing, oil and gas, retail and consumer services, transportation and logistics, and utilities.

Helping organisations move to an agile way of working

We are a **learning organisation**, bringing **deep experience** to creating a unique model to transform large organisations

Businesses need to focus on the outcomes they want, not the output of 'being' agile.

4

Organisations need to get the simple stuff right. It's important to stop starting and start finishing. We help organisations stick to the proven practices so they get results.

3

HIGHLY SITUATED LEARNING

5

TRIED AND TESTED METHODS

WE ARE IN BUSINESS. LEAN AGILE IS A MEANS TO AN END NOT THE END

The big lie is that agile is hard - it isn't. We strip everything back to the essentials needed to get the work done.

6

Traditional training gives one knowledge, not understanding. To create true competency, people have to work 'in situ' with real work. We run situated learning programmes which is the key to performance and dissemination.

HIGH DISCIPLINE EXECUTION

LOW / NO COACH MODEL

RADICAL SIMPLIFICATION

2

1

People need role and process clarity to be successful. We focus people on the right things, that 'work' based on science and metrics, not anecdotes and the internet lore.

Classic coaching does not scale and is an economic disaster. We mentor for execution, not for theoretical knowledge acquisition.

Driving pace and scale in a dynamic market with CGI's Lean Agile DevOps value propositions

Readiness

Get a prioritised list of recommendations to inform the next steps of your Lean Agile DevOps transformation enablement. Let our coaches assess your readiness / maturity across skills, process and technology.

Transformation Enablement

Plan and execute Lean Agile DevOps transformation - from strategy workshops to agile operating model design, creation of implementation backlog and roadmap to stakeholder communications.

Coaching & Support

Have CGI's experienced Lean Agile DevOps coaches develop a tailored coaching plan and take your teams to the next level.

Training

Receive a training curriculum and courses on Lean Agile DevOps tailored for your organisation's needs.

Resource Augmentation

Augment your Lean Agile DevOps team by providing CGI's certified and experienced agile practitioners—from individual roles to complete teams.

Delivery Model

Have your critical applications developed by CGI using a Lean Agile DevOps delivery model.

About **CGI**

Founded in 1976, CGI is among the largest independent IT and business consulting services firms in the world. With 77,500 consultants and other professionals across the globe, CGI delivers an end-to-end portfolio of capabilities, from strategic IT and business consulting to systems integration, managed IT and business process services and intellectual property solutions. CGI works with clients through a local relationship model complemented by a global delivery network that helps clients digitally transform their organisations and accelerate results.
