Avoid financial surprises with controlled SaaS

You can't control what you can't see!

CHALLENGES

One of the big advantages of Software as a Service is the ease to purchase and implement it. No lengthy implementation projects are required. Order the subscriptions, pay with your credit card and the software can be used immediately.

As good as this sounds, this advantage comes with some challenges:

➢ Most companies will not be able to track their annual software spend and are not aware of the yearly increases in SaaS costs.

➢ The data that is sent over the internet is often not secure and data privacy is not guaranteed.

➢ Due to decentralized contracting and subscription purchasing and the lack of a standard, negotiating opportunities are missed.

➢ Subscriptions are renewed by default due to the lack of usage information, leading to 30% of all SaaS being often unused.

➢ And 89% of all employees that have left the company often still have access to their SaaS subscriptions.

SOLUTION

CGI offers a comprehensive approach to cater to organization's requirements. They can be requested individually or together.

- **Maturity Assessment**

  Demonstrates maturity level of SaaS related processes based on CGI's SaaS management framework and recommends actions for higher maturity level.

- **Implementation and Management**

  Uses maturity assessment results and/or use organizational goals to implement SaaS controls where Business and IT collaborates to deliver cost effective SaaS services.

OFFERING

CGI practices SaaS Maturity assessment and service implementation regularly with existing client base.

Our maturity assessment measures organizations processes and delivers plan to achieve higher maturity. SaaS services are offered as independent or extension to Software Asset Management service that provides a complete control on software assets.
BENEFITS

- **Financial predictability** – Know what your organization is spending its money on

- Continual **cost optimization** and reporting

- **One-stop-shop** – SaaS part of the service catalogue

- **Streamlined** processes catering to speedy assessment of applications and decision making

- Enrichment of **usage data** using multiple sources and availability of dashboards for insights
