

Scope 1-3 Impact Tracking

By tracking the sustainability impact of your business and your supply chain, you will understand and can improve the quality and compliance of your data and thus gain a more responsible business.

The Offer

First, we are reviewing or Creating a Sustainability strategy and plan. We continue to map the internal available data needed and note any possible gaps. If a tool is needed, we advise towards the one best suited for your company, install, and configure it to best fit your needs. Finally, we identify and advice you to the focus areas to start your work with.

The Value

Awareness of how different materials and sourcing impacts your footprint. Enables steering towards more sustainable products and services. Former unknown parts of the full supply chain can be mapped and estimated to give a complete view of your footprint.

The pricing

This offer can either be designed as a service package or as a consulting service. The pricing for this service is based on Time and Material if not agreed in a different form.

Sustainability

This offer will help with your sustainability reporting and make sustainable consumption possible in line with UN SDG no.12 and no. 13.

This offer can be customized to cover more sustainability aspects and other UN SDG´s.

SCOPE 1: Direct emissions from company-owned and controlled resources (e.g., natural gas heating and leased cars).

SCOPE 2: Indirect emissions from the generation of purchased energy (to heat or cool buildings, to produce).

SCOPE 3: All other indirect emissions and impact from activities not owned or controlled (supply chain and business travel).
