Sunflower Assets®

Infrastructure Edition | Technical Data

Take control of your asset management tasks

Sunflower Assets®, web-based asset management software gives property managers the tools to monitor, control and account for all property transactions. Sunflower Assets has two deployment options: Sunflower Assets Standard Edition and Sunflower Assets Infrastructure Edition.

Sunflower assets infrastructure edition

The Infrastructure Edition provides an easy-to-maintain, simple-to-administer tool that offers all the robust, scalable and secure functionality that Sunflower Assets provides. Perform administration tasks such as user account provisioning, authentication, system backups and software updates through the web administration portal. No additional application or database administration skills or tasks are required. The Infrastructure Edition reduces internal IT costs and tasks associated with managing and maintaining the application so that end users have up-to-date tools that effectively manage their assets.

Workstation specifications

Operating System(s)
- Microsoft Windows
- Apple Mac OS

Web Browser

(Java Web Start Required)

- Microsoft Internet Explorer
- Microsoft Edge
- Mozilla Firefox
- Google Chrome
- Apple Safari
