

# Partner Collaboration Service

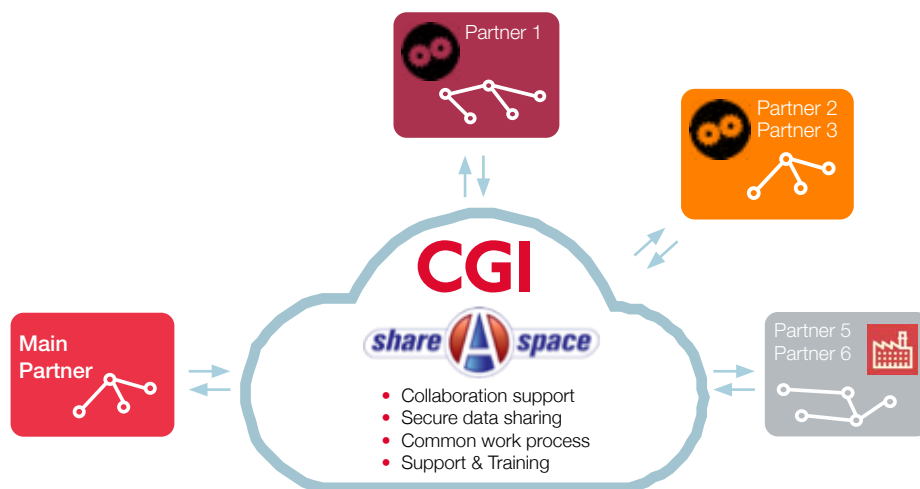

One of today's most prominent trends, across all industries, is for companies to focus on their core business and outsource parts of their operations to external partners. Being able to maintain competitive collaborations with others is a key success factor. The CGI Partner Collaboration Service provides the tools and the process required in order to be able to share a work platform and information in a fast, agile and secure way, throughout the entire value chain. Without giving your partners access to your valuable assets, CGI helps you to leverage the full potential of your business partnerships and maintain control over your processes.

## SUCCESSFUL COLLABORATION WITH PARTNER

Business drivers for a successful collaboration with external partners.

- Secure sharing of information between external partners.
- Flexibility to team up and collaborate with new partners. Clients often want to increase their number of collaboration partners, and they need support for their extended enterprise.
- Quick start-up to shorten lead times and to achieve a structured way of working from the outset of the project.
- Efficient collaboration service that can be scaled up or down as required.

The CGI Partner Collaboration Service enables sharing of information between you and your collaboration partners. The service offers a fully automated workflow closely integrated with your business process for long-term partnerships. For more ad hoc collaborations, the service can offer a workflow with a higher degree of manual input, without compromising on control or information security.

One partner can enjoy full integration with the service while other can use a more basic, manual process. This allows businesses to quickly initiate collaborations with new external partners, making it possible for them to exchange and translate business information through a shared workflow closely aligned with each partners' every-day work process. CGI Partner Collaboration Service provides the tools and the processes to share information in a fast, agile and secure way, through the whole value chain.

## BENEFITS

- Collaboration with a large number of partners
- Secure sharing of business information
- Easy to add new partners
- Monthly service fee based on usage
- Scale up or down by adding or removing partners
- Quick start-up with manual information exchange
- Full integration for increased efficiency
