What's cooking?

When it comes to dinner time, there's a whole world of choice. The options are endless; you can order in, eat out, cook a meal from scratch — whatever takes your fancy. When you know what you want, it's nice to know that you can get it without too much hassle.

The new 'mix and match' type deals from supermarkets are an excellent example of getting your perfect meal without any fuss. Handpick each element, from the starter to the wine, and create a bespoke meal that exactly matches your taste. You can pick from a range of dishes, all ready prepared, so that the dinner you want lands on your table in no time at all. No worrying about timing, minimal washing up, and a wonderful meal every time. What more could you want?

When it comes to your IT, you want to deliver that same level of customised service with the same amount of ease. You know what you want; pre-built offerings that match your taste and satisfy your appetite straightaway. After all, no one likes waiting around with an empty stomach. With our G-Cloud service, you get a quick, easy way to create tailored IT solutions in no time at all.

The readymade 'building blocks' of our service have been engineered around the specific needs of the public sector. It means that from the offset, they match your taste and align with the goals you need to achieve. While we know that there's no one-size-fits-all approach when it comes to IT, we know how valuable the simplicity of a modular solution can be for you.

And the best part? Because it's offered in the cloud, it means that any service you want can be rolled out quickly. Just like the pre-prepared meal components, the route to full satisfaction is as short and quick as possible.

In the same way that trained chefs prepare the meals for the supermarkets, you know that with us, you're in safe hands. We've spent enough time in the kitchen to know what we're cooking — our cloud services are built on a mature governance framework, and we have more than 35 years of experience as a full-service IT and infrastructure service provider.

So if you'd like to see what's on our menu, just get in touch.

Focus
How cloud-based solutions can help you.

PaaS elimates the expense of evaluating, buying and configuring all the hardware and software you need for custom-building applications, in the same way that a Swiss Army Knife can provide the full functionality of a toolbox without having to go and purchase the individual components.

It uses a mix of CGI Accelerators, Oracle Fusion Middleware products and consulting services to create the most effective pre-built, readily configured Oracle Middleware platform. This means that it can be easily standardised, at the same time as being fully managed and secure.

Like a Swiss Army Knife, standard issue means that this is a guaranteed evergreen approach, ready for anything. It's aligned to Oracle, which means you're first in line for extensions and upgrades, adding any extra tools you might have a need for.

And, as ever, if you need any assistance, our specialists are on hand; regularly building, supporting and upgrading middleware platforms and applications, meaning you get the benefit of their constantly updated knowledge.
